

Subminiature Load Cell

MODEL 8413, MODEL 8414 with overload protection

Model 8414 with overload protection

Highlights

- Measuring ranges from 0 ... 5 N up to 0 ... 5 kN
0 ... 1.1 lbs up to 0 ... 1124.0 lbs
- Especially flat design from 3.3 mm
- Non-linearity 0.25 % F.S.
- Made of high quality stainless steel

Options

- Extended temperature compensated range -55 °C ... +120 °C
- burster TEDS
- Various cable lengths available
- Standardized output signal 0.8 mV/V

Applications

- Adjustment of gauges
- Force measurements on the inside of precision tools
- Monitoring of control elements
- Regulation of forces in medical technology
- Control instruments in precision machinery
- Adjustment and pre-load of devices

Product description

This miniature force sensor was optimised with respect to its height and is, at only 3.4 mm, the lowest known sensor with strain gage technology. Hardly higher than the diameter of its connection cable, it can also be housed in conditions where space is limited. Along with its minimal geometry, the force sensor is also particularly light. It has a high resonance frequency to follow quickly changing load alternations. Despite its extreme miniaturisation, in its application it remains completely robust and suitable for industry, not only with regard to the highly flexible cable connections or the full welding of sensors for the measurement ranges $\geq 0 \dots 10$ N.

The miniature compression force sensors are flat, cylindrical discs with covered bottoms. The central load application button for taking on compression forces is an integrated part of the top, which is the sensor's membrane. On its bottom, the strain gages are fixed on the inside of the housing and interconnected with a full Wheatstone bridge. This passes on, for force applications, an output voltage which is directly proportional to the size of the measurement.

The connection cable exits radially from the sensor housing and is additionally stabilised by a case for measurement ranges $\geq 0 \dots 10$ N. The support area of the bottom of the sensor is annular, however arranged as a circular area for measurement range $0 \dots 5$ N.

* Measuring range 0 ... 5 N with circular contact surfaces on the bottom with Ø 8,5 mm

** Cable at this length rigid but without a slave

Electrical termination

Output signal

burster load cells are based on a strain-gage Wheatstone bridge. This measurement principle means that the output voltage mV/V is highly dependent on the sensor supply voltage. Our website contains details of suitable instrumentation amplifiers, indicator and display devices and process instruments.

Accessories

Connectors and units

Order code

Connectors	
9941	Connectors 12 pin, suitable to all burster desktop units
9900-V209	Connectors 9 pin, suitable to SENSORMASTER, DIGIFORCE® and TRANS CAL
9900-V229	Connectors 9 pin with TEDS
9900-V245	Connectors 8 pin, suitable to ForceMaster
Units	
7281-V0001	Mobile measuring device with strain gage simulator and sensor test (R_{it} , R_{gt} , Shunt, R_{ISO})
refer to section 9	Sensor electronics, amplifier and process control units like digital indicator model 9180, model 9163, modular amplifier model 9250 or DIGIFORCE® model 9307

Calibration

Test and calibration certificate	
Included in scope of delivery of sensor	Amongst other data, includes figures for zero point, full-scale output and calibration offset
Standard factory calibration certificate for load cells or measurement chains (WKS)	
Optionally available	Our standard factory calibration certificate includes 11 measurement points, starting at zero, spread evenly in 20% steps over the full measuring range, for increasing and decreasing load under the same installation conditions.
Special factory calibration certificate for load cells or measurement chains (WKS)	
On request	We are happy to calibrate sensors and measurement chains to the customer's specification.
German-accredited DAkkS calibration certificate for sensors and measurement chains (DKD)	
Optionally available	Our DAkkS-certified calibration laboratory provides calibration certificates to DIN EN ISO 376. The calibration certificate includes 21 measurement points, starting at zero, spread evenly in 10% steps over the measuring range, for increasing and decreasing load under various installation conditions. DAkkS calibrations can be performed in the compression and/or tension direction depending on the sensor type.
